

Change Up Your Favorite Card Games!

If your card games are getting a bit boring, try using AI to add something new to your gameplay!

1. Make house rules! Custom rules can bring life to games that you have played a lot or want a change to.

Questions to ask: How can we make this game more strategic? What variations will add new life or novelty? What rules can we add to make this game less luck-based? What are three silly variations for this game that are still fair?

2. Adjust the difficulty of the game! AI can make a game more difficult or tweak the difficulty for different ages.

Questions to ask: What rules can we add to make the game accessible, fun, and fair for both younger and older players? What rule changes would help younger players stay competitive without making the game less fun for older players?

Change Up Your Favorite Card Games!

3. Add more math! This is similar to changing the difficulty but allows you to practice your math skills.

Questions to ask: How can we add simple math to this game without slowing it down? What scoring rule would encourage players to practice multiplication or fractions? Can you suggest a few math-based rule changes for different age levels? How can we make the game more strategic using math?

4. Use existing cards to make a new game!

Make a game using collectible cards like Pokémon or Magic: The Gathering.

Questions to ask: What kind of game could we play using these cards? Can you suggest three different game ideas that would use the cards we have in different ways? How could we use these cards with rules from another game we already know?
